System Administrator @Sacombank
Ho Chi Minh City, Vietnam

Tóm tắt

Short-term goal:

Secure a full-time position as a DevOps/Cloud/System Engineer in a reputable company, utilizing my internship experience and academic background in computer networking and data communication.

Concurrently, successfully complete my undergraduate program.

Long-term goals:

Continuously enhance my skills and knowledge in system, cloud technologies, and containerization to become an expert in the field.

Advance in my career to take on leadership roles, contributing to the development of innovative solutions and guiding junior professionals in the industry.

Potentially pursue further education or certifications to deepen my expertise and stay current with emerging technologies in the field of computer networking and data communication.

Kinh nghiệm

Sacombank

2 năm 1 tháng

System Administrator Specialist

February 2025 - Present (1 năm 6 tháng)

Ho Chi Minh City, Vietnam

As a System Administrator/Platform Engineer, I operate and optimize digital banking applications and microservices running on Red Hat OpenShift (OCP), along with several domain applications hosted outside the cluster. I focus on reliability, performance, security, and smooth production operations for mission-critical banking services.

I manage large-scale Kubernetes/OpenShift clusters on RHEL, covering deployment, configuration, scaling, networking, storage, and security policies. I work extensively with CI/CD, automation, and CLI tooling to standardize delivery and reduce manual effort.

I implement and integrate enterprise messaging with IBM MQ, and configure Redis Enterprise in high-availability setups to support low-latency and resilient

application workloads. I also build and maintain observability stacks using Prometheus, Elasticsearch, and APM, including dashboards, alerts, and tracing to quickly detect and resolve issues.

I have hands-on experience migrating legacy banking applications from outdated stacks (for example, Java 8 on RHEL 6 with older JBoss) to modern platforms (such as JDK 21 on newer RHEL and JBoss versions). This includes compatibility analysis, planning, testing, and phased rollout with minimal downtime.

Beyond platform work, I collaborate closely with application, security, and business teams on deployment, configuration, tuning, and incident resolution.

I have participated in DRP and DR exercises for core banking, cards, and payment systems, and handled high-severity production incidents.

I also support the intake and initial setup of physical servers and related infrastructure, giving me end-to-end visibility from hardware to application layer.

Unix Specialist

July 2024 - January 2025 (7 tháng)

Ho Chi Minh City, Vietnam

ACB - Asia Commercial Bank

Cloud Engineer

September 2023 - March 2024 (7 tháng)
